About

I have been exploring all things digital fashion for the past three years, and have studied on the Clo3D Virtual Fashion Design course at The New School.

I love pattern cutting and designing in Clo3D, and am interested in creating digital assets, as well as merging digital with real-life garment construction/production.

Experience

3D virtual fashion pattern cutter & designer using Clo3D

| Mar 2020 - Now

As a virtual fashion pattern cutter & designer, I help other fashion designers create digital assets of either existing or completely original garments. I have experience of garment construction and sewing in real life, so I understand how to create a realistic and accurate digital garment for either production in real life, or purely for the digital world.

My work includes:
Pattern cutting, design, editorial-style digital asset creation, animation, video, and rendering. I use Clo3D, substance painter, blender, and other software to achieve high end results.

Education & Training
