## About

With over 15 years of experience in software quality assurance and testing, I am a Lead Test Engineer at Wyplay, a leading provider of software solutions for broadcasting media and telecommunication industries.

I have a strong background and expertise in test automation and manual testing, using various tools and frameworks such as Python, Selenium, Jira, and DevOps.

In my current role, I lead and manage the testing activities of multiple projects, platforms, and devices, including SetTop Box, IPTV, OTT, AndroidTV, mobile, and UI.

I also ensure the compliance and quality of the software products with the client requirements and specifications, using agile methodologies and data transport structures such as JSON, XML, and API testing.

I have successfully delivered high-quality software testing solutions for clients across different regions and languages, working with geographically distributed teams and stakeholders.

My goal is to provide the best user experience and satisfaction for the end-users of software products.
